## Steel Scaffold Boards for Tube and Fittings

- The fireproof replacement for wood boards

# Improve safety - Choose a fireproof solution

After the tragic Grenfell Tower fire and other major fires during construction projects, a UK Government inquiry has significantly highlighted fire retardance, or lack thereof, of some products used within the Construction Industry.

As a result more Clients are specifying fireproof or fire retardant products are used on building sites, especially for larger public refurbishment projects. Increasingly, more and more companies in the UK have started to use system scaffolding. However, many still have huge stocks of tube and fittings; utilising timber scaffold boards, the price of which is rap-

idly increasing as a Global shortage of all wood products means timber merchants are struggling to meet demand. Steel boards provide a safer, stronger, sustainable and fireproof solution; eliminating the need to replace wooden boards over and over and over again. This equates to huge savings, which equals a more cost effective solution.

**Fireproof solution**

**Cost effective investment**

**Long lasting product**

# Long term investment

Fireproof steel scaffold boards for Tube and Fittings

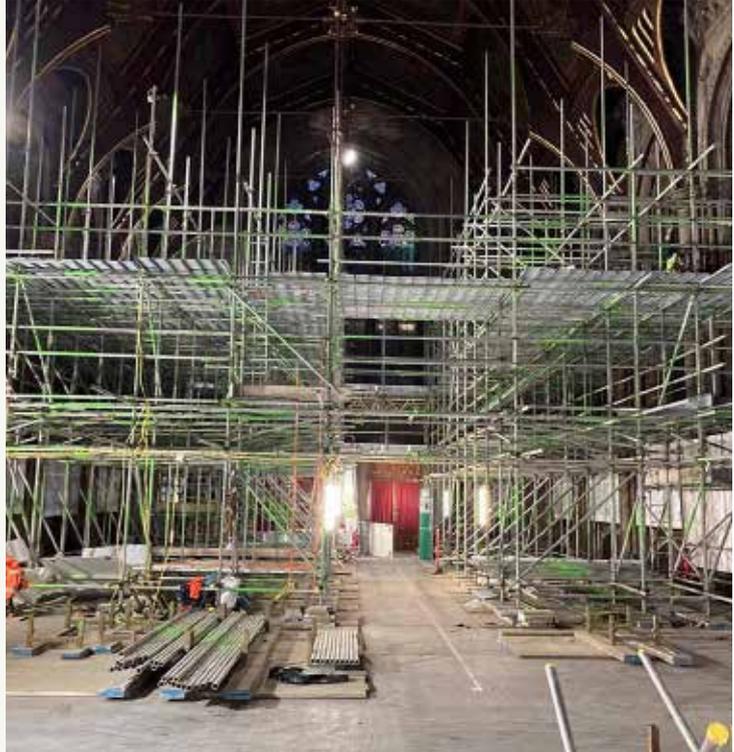

## Replace wood boards with steel scaffold boards

**How much are you spending every year on wood boards?**

The Global shortage of timber is worsening, with costs increasing for wood boards. Did you know you can easily change from wood to steel scaffold boards which are a safer, longer lasting and more cost-effective solution?

Changing from wood to steel boards is simple. A PcP Steel Board lasts 15 years or so, whilst a wood board has a maximum lifespan of 3 or 4 years...

## Save money after 4 years

If a fire retardant wood board has a lifespan of 3 years, after that, it needs to be replaced. A steel board with a life span of **15 years** costs between 35 % to 40 % more. However, you will start saving money approximately 4 years after replacing your wood boards with PcP steel boards.

## Reduce replacement rate by 500 %

For example, if you have a stock of 100,000 x 13ft (3.9m) wood boards, replacing 5-10% of these every year. The lifespan of a PcP steel plank is 15 years compared to 3 years for wood boards. By using PcP steel planks instead, you will reduce your replacement rate by 500 %.

## Product details

Steel scaffold boards for Tube and Fittings

PcP

# Scaffold Board -T&F228 03 Steel Z275

PcP steel scaffold boards for Tube and Fittings are lighter, at 19 kg, than wood boards. This means, safer handling with faster erection and dismantling times, meeting and exceeding all the requirements of Health and Safety regulations.

The unique surface with upward grip holes on PcP steel scaffolding boards provides the highest possible non-slip properties for this kind of product – compliant to R13 DIN 51130; which minimises the risk of slip and fall accidents. The holes also ensure that the scaffolding is drained and always dry – there is no need to sweep or turn the boards over after snow or frost.

## Specifications

Fireproof

---

Load Class 6 at 1.5m transom centres

---

Patented teardrop profile and transom tie design

---

Teardrop edge / no rough welding

---

14 mm dia. upward grip holes - 9 mm dia. downward drainage holes

---

15 years lifespan: ISO 9223:2012 Environmental Class C3

---

## Compliance

UK tested and compliant to BS EN 12811-1:2003

---

Pre galvanised Steel Z275 complying to BS EN 10346:2015

---

Slip resistant surface tested according to R13 DIN 51130

---

## Features

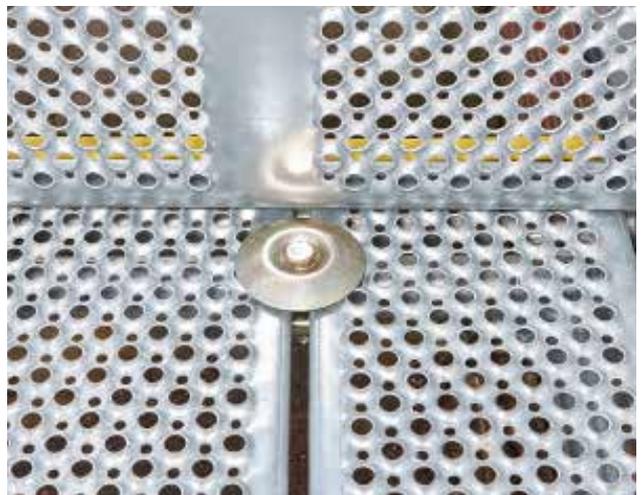

Steel scaffold boards for Tube and Fittings

PcP

# Easy to replace - “The missing piece of the jigsaw”

## Replace and use your existing fittings

The PcP steel scaffold board is a universal T&F product designed to make erection and dismantling easier for scaffolders. You can simply replace old wood boards with new, long-lasting steel scaffold boards, and reuse your existing fittings. PcP Steel planks can be used with all standard board retainers, limpet clamps, toe board clips or singles. This way, you don't need to spend money on new fittings. Simply replace your old boards, reuse your existing fittings, and your steel scaffolding system is ready to use - *“it's the missing piece of the jigsaw”*.

# Standard items

Steel scaffold boards for Tube and Fittings

	Length	Width (mm)	Height (mm)	Thickness (mm)	Weight (Kg)	Item no.
Scaffold board T&F228 O3	1.2m	228	38	2	6.00	F404500400

Fixing clip / Transom Tie	171mm	77	50	2	-	C417030201
High vis end cap	210mm	28	12	-	-	F912509100

## Fixing Clip

PcP fixing clip / Transom Tie for scaffold boards make it quick and easy to tie your boards down. You can also use your existing fittings with the steel boards.

## High vis end cap

Optional fire retardent (Class B) high vis end cap

## Steel Scaffold boards - a fireproof and cost effective solution

**Fireproof solution**

**Ergonomic**

**Life time**

**Very high slip-resistance**

**Lighter than a wood board**

**Use with standard board retaining fittings**

## 30 years' experience in scaffolding

Steel scaffold boards for Tube and Fittings

PcP

# Solutions for system suppliers of scaffolding

PcP has been manufacturing steel scaffold boards in the UK and Europe for all major scaffolding systems and brands for over two decades and is a full member of the NASC and Scaffolding Association. Our production facilities are based in Denmark, with a large inventory held in our UK Depot available for immediate delivery.

# Engineering Safety™

Safety is at the very heart of our products and through everything we do. Our ambition is to enable our customers no matter their industry to safely operate in their work environment, supported and surrounded by innovative PcP solutions.
